

SETTING UP AC COVERS ON EVERY JOB

How we protect our property owners AC Units

At Trust Roofing, we protect our customers' property like it is our own. An air conditioning unit is one of the most expensive items outside a home. During a roof replacement, shingles, nails, dirt, and other debris can fall onto the unit.

Other solutions like covering the AC with plywood or a tarp can block airflow and may cause the AC unit to overheat or become damaged if it is running.

That is why Trust Roofing uses **Catch-All AC Covers**. They protect the unit while still allowing it to breathe. They also give our customers a more professional job site.

1 What Comes with the AC Cover

When you remove the AC cover from its storage case, you will find:

- Telescoping rods that adjust to different sizes
- Yellow connector pieces that attach to the telescoping rods
- Red corner pieces that connect the frame together
- The protective net that goes over the completed frame

2

Attach the Red Connectors

If the red connector pieces are not already attached to the telescoping rods, connect them now.

Tip: Once these are installed, they can usually stay attached in the bags for future jobs.

3

Build the Frame/ Adjust The Size

Connect the yellow corner pieces to the red connectors.
Continue connecting the pieces until the frame is fully built.

Adjust the Size

Extend or shorten the telescoping rods until the frame is the correct size for the customer's AC unit.

The frame should fit well over the unit so any debris that comes down cannot touch it.

Extend the unit to the correct size so that it sits a few feet higher than the unit

4

Install the Netting

Pull the protective net over the frame.
Make sure the net is tight and fully covers the top and sides of the frame.

Make sure it is tight before roofing begins.

Finished Product

- ✓ Protects the homeowner's AC unit
- ✓ Keeps shingles, nails, dirt, and debris off the equipment
- ✓ Allows the AC unit to breathe while operating
- ✓ Gives the job site a clean and professional appearance
